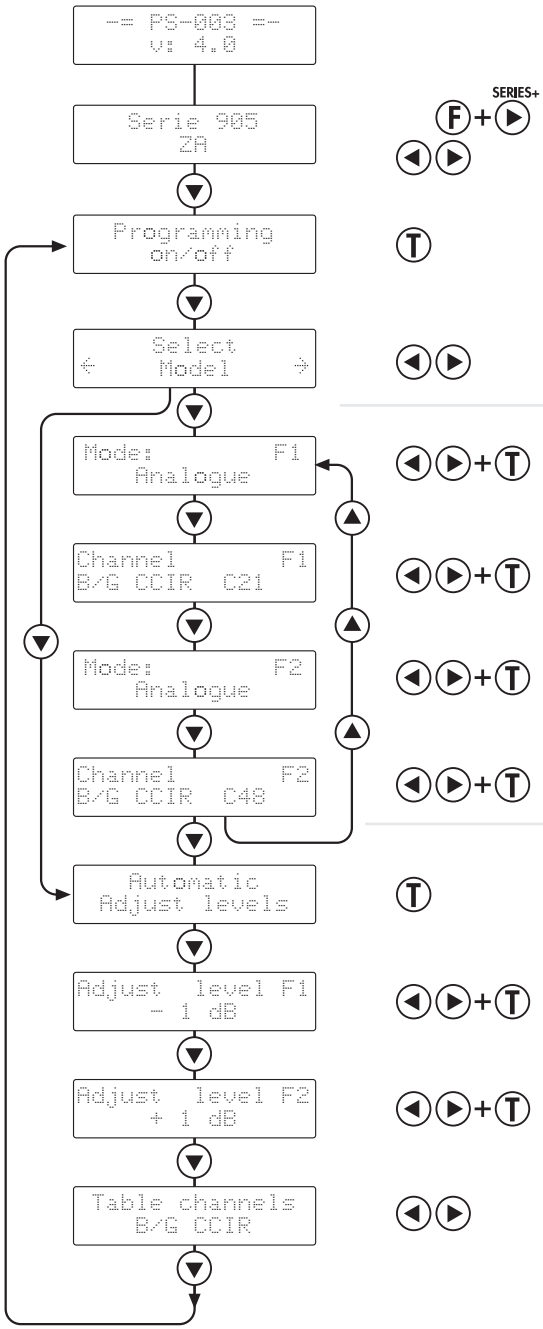
QUICK PROGRAMMING GUIDE
905-ZA (Double filter)

ENG



Press any key to turn on the PS-003.

F + SERIES+

Press the **F** key followed by **SERIE+** to set the programmer to select the series to be programmed. Use the arrows to select SERIE 905 ZA, then press ▼.

T

Pointing at the amplifier PA-320, press transmit Ⓣ for the amplifier to activate the programming mode.

Using the arrows, select the model which you intend to program: **ZA-411 Double filter**.
** If no model is selected, you will go straight to the menu for the automatic adjustment of levels.*

Press the programming button PRG of the first ZA.

◀ ▶ + T

For filter 1, use the arrows to select analogical mode, for analogical or digital channels, for digital channels. If a multichannel filter is used and if any of the channels is analogical, select analogical mode.
Then press transmit Ⓣ.

◀ ▶ + T

For filter 1, use the arrows or the numeric keypad to select the channel of filter 1. For multichannel filter, press the ● key and use the arrows to increase or decrease the width of the filter. Then press transmit Ⓣ.
Press Ⓞ to deactivate the filter.

◀ ▶ + T

The same as for filter 1

◀ ▶ + T

The same as for filter 1

Press the programming button of the next module and go back to the step Mode: F1, or, if you have already programmed all the modules, continue with the following steps.

T

Press transmit Ⓣ to automatically adjust the output levels of all the modules.

◀ ▶ + T

Use the arrows to select the amount by which the level of filter 1 is increased or decreased. Each time you press the Ⓣ key, the output level will increase or decrease by this amount.

◀ ▶ + T

The same as the previous step for filter 2.

◀ ▶

Select the standard of the country or the introduction of channels by frequency.

Note 1: You can send all the data to the module in a single go by pressing **F** + **COPY**.

Note 2: Once the programming has been completed, regulate the output level of the PA-320.
